

ABSTRACT OF THE DISCLOSURE

Disclosed is a ground stake comprising a shaft defining a shaft axis, the shaft further comprising a penetration end shaped to facilitate forcing of the the shaft into soil and a driving end for driving the shaft into soil, an attachment portion adapted to securely fasten an object to the stake, a short vane depending outward from the shaft axis, the short vane defining a backfill space between the short vane and the shaft axis, and wherein the short vane is effective in substantially resisting the removal of the shaft from soil into which it has been driven.
